Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-36 drawn to despread a signal in spread spectrum receiver, classified in class 375, subclass 152.
 - II. Claims 37-51, drawn to processing a data signal using a Doppler shift system, classified in class 342, subclass 99.
 - III. Claims 52-65, drawn to a satellite positioning system, classified in class 342, subclass 357.06.

2. The inventions are distinct, each from the other because of the following reasons:

Group I refers to a method for despread a spread spectrum signal in a receiver. Group II refers to a Doppler shift system for processing data from a code serial input. Group III refers to an apparatus and operations performed in a satellite positioning system including measuring the time related to satellite data messages.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
